# **TEST REPORT**

Test report no.: 1-1953/16-01-04

#### **Testing laboratory**

#### **CETECOM ICT Services GmbH**

Untertuerkheimer Strasse 6 – 10
66117 Saarbruecken / Germany
Phone: + 49 681 5 98 - 0
Fax: + 49 681 5 98 - 9075
Internet: http://www.cetecom.com
e-mail: ict@cetecom.com

#### **Accredited Testing Laboratory:**

The testing laboratory (area of testing) is accredited according to DIN EN ISO/IEC 17025 (2005) by the Deutsche Akkreditierungsstelle GmbH (DAkkS)

The accreditation is valid for the scope of testing procedures as stated in the accreditation certificate with

the registration number: D-PL-12076-01-01

#### **Applicant**

#### **Bosch Connected Devices and Solutions GmbH**

Tuebinger Str. 123

72762 Reutlingen / GERMANY
Phone: +49 (711) 811-3617318
Fax: +49 (7121)35-0

General Requirements and Information for the Certification of Radio Apparatus

For further applied test standards please refer to section 3 of this test report.

#### **Test Item**

Kind of test item: Data logger for logistics use

Model name: TDL110

**FCC ID**: 24ADSJTDL110 **IC**: 12595A-TDL110

Frequency: DTS band 2400 MHz to 2483.5 MHz

Technology tested: Bluetooth® LE

Antenna: Integrated ceramic chip antenna

Power supply: 3 V DC by CR123 battery

Temperature range: -30°C to +85°C

Radio Communications & EMC

## 2 General information

#### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CETECOM ICT Services GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM ICT Services GmbH.

The testing service provided by CETECOM ICT Services GmbH has been rendered under the current "General Terms and Conditions for CETECOM ICT Services GmbH".

CETECOM ICT Services GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CETECOM ICT Services GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CETECOM ICT Services GmbH test report include or imply any product or service warranties from CETECOM ICT Services GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CETECOM ICT Services GmbH.

All rights and remedies regarding vendor's products and services for which CETECOM ICT Services GmbH has prepared this test report shall be provided by the party offering such products or services and not by CETECOM ICT Services GmbH.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

| Number of channels :                                   | 40   |
| Antenna :  | Integrated ceramic chip antenna  |
| Power supply :   | 3 V DC by CR123 battery  |
| Temperature range :                                    | -30°C to +85°C   |

## 5.2 Additional information

The content of the following annexes is defined in the QA. It may be that not all of the listed annexes are necessary for this report, thus some values in between may be missing.

Test setup- and EUT-photos are included in test report: 1-1953/16-01-01\_AnnexA 1-1953/16-01-01\_AnnexB

1-1953/16-01-01\_AnnexC

#### 6 Test laboratories sub-contracted

None

## 7 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

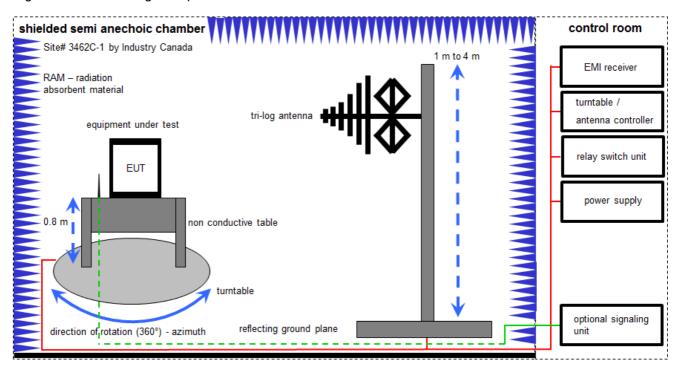

#### Agenda: Kind of Calibration

| k     | calibration / calibrated                   | EK  | limited calibration                              |
|-------|--|-----|--|
| ne    | not required (k, ev, izw, zw not required) | ZW  | cyclical maintenance (external cyclical          |
|       |  |     | maintenance)                                     |

| vlkl! | Attention: extended calibration interval   |     |  |
| NK!   | Attention: not calibrated                  | *)  | next calibration ordered / currently in progress |

#### 7.1 Shielded semi anechoic chamber

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 9 kHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are confirmed with specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter

FS = UR + CL + AF

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

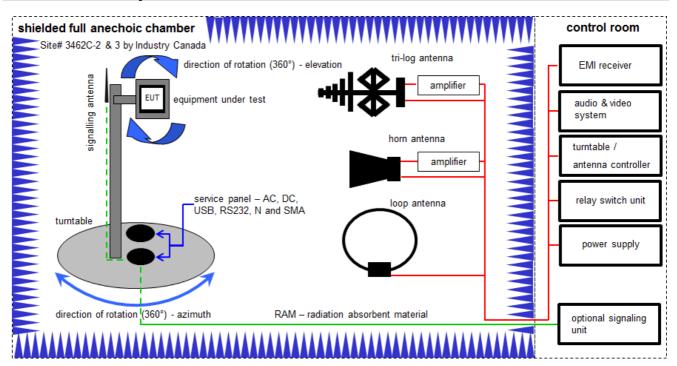

#### Example calculation:

FS  $[dB\mu V/m] = 12.35 [dB\mu V/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dB\mu V/m] (35.69 \( \mu V/m \))$

#### 7.3 Radiated measurements > 18 GHz

Measurement distance: horn antenna 50 cm

 $FS = U_R + CA + AF$ 

(FS-field strength; U<sub>R</sub>-voltage at the receiver; CA-loss signal path & distance correction; AF-antenna factor)

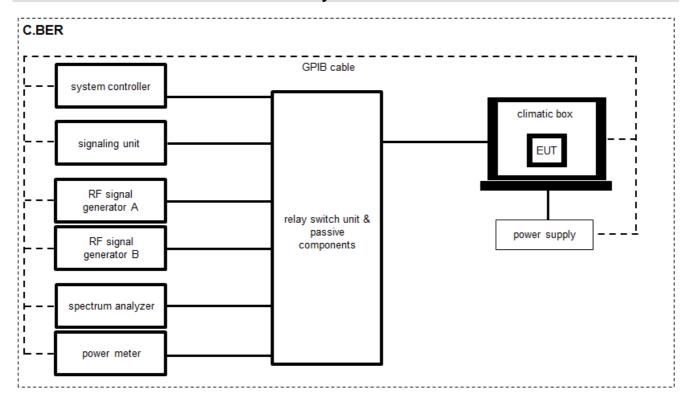

#### Example calculation:

 $\overline{\text{FS [dB}\mu\text{V/m]}} = 40.0 \text{ [dB}\mu\text{V/m]} + (-60.1) \text{ [dB]} + 36.74 \text{ [dB/m]} = 16.64 \text{ [dB}\mu\text{V/m]} (6.79 \ \mu\text{V/m})$

#### 8 Sequence of testing

#### 8.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1.5 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

- Identified emissions during the premeasurement are maximized by the software by rotating the turntable from 0° to 360°. In case of the 2-axis positioner is used the elevation axis is also rotated from 0° to 360°.
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

#### 8.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

#### 8.3 Sequence of testing radiated spurious 1 GHz to 18 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### **Premeasurement**

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height is 1.5 m.
- At each turntable position and antenna polarization the analyzer sweeps with positive peak detector to find the maximum of all emissions.

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximizes the peaks by rotating the turntable from 0° to 360°. This measurement is repeated for different EUT-table positions (0° to 150° in 30°-steps) and for both antenna polarizations.
- The final measurement is done in the position (turntable, EUT-table and antenna polarization) causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, EUT-table position, antenna polarization, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

#### 8.4 Sequence of testing radiated spurious above 18 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet.
- The measurement distance is as appropriate (e.g. 0.5 m).
- The EUT is set into operation.

#### **Premeasurement**

• The test antenna is handheld and moved carefully over the EUT to cover the EUT's whole sphere and different polarizations of the antenna.

- The final measurement is performed at the position and antenna orientation causing the highest emissions with Peak and RMS detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement and the limit is stored.

# 9 Measurement uncertainty

| Measurement uncertainty                                  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|
| Test case  | Uncertainty                              |  |  |  |  |  |
| Antenna gain   | ± 3 dB                                   |  |  |  |  |  |
| Spectrum bandwidth                                       | ± 21.5 kHz absolute; ± 15.0 kHz relative |  |  |  |  |  |
| Maximum output power                                     | ± 1 dB                                   |  |  |  |  |  |
| Detailed conducted spurious emissions @ the band edge    | ± 1 dB                                   |  |  |  |  |  |
| Band edge compliance radiated                            | ± 3 dB                                   |  |  |  |  |  |
| Spurious emissions conducted                             | ± 3 dB                                   |  |  |  |  |  |
| Spurious emissions radiated below 30 MHz                 | ± 3 dB                                   |  |  |  |  |  |
| Spurious emissions radiated 30 MHz to 1 GHz              | ± 3 dB                                   |  |  |  |  |  |
| Spurious emissions radiated 1 GHz to 12.75 GHz           | ± 3.7 dB                                 |  |  |  |  |  |
| Spurious emissions radiated above 12.75 GHz              | ± 4.5 dB                                 |  |  |  |  |  |
| Spurious emissions conducted below 30 MHz (AC conducted) | ± 2.6 dB                                 |  |  |  |  |  |

In addition to the antenna assembly gain (G), the beamforming gain (Y) may have to be take into account when performing the measurements. |

## 12 Measurement results

## 12.1 System gain

#### **Measurement:**

The antenna gain of the complete system is calculated by the difference of radiated power in EIRP and the conducted power of the module. For normal Bluetooth® devices, the GFSK modulation is used.

| Measurement parameters  |  |  |  |
|-------------------------|--|--|--|
| Detector                | Peak   |  |  |
| Sweep time              | Auto   |  |  |

## Plots:

## Plot 1: lowest channel

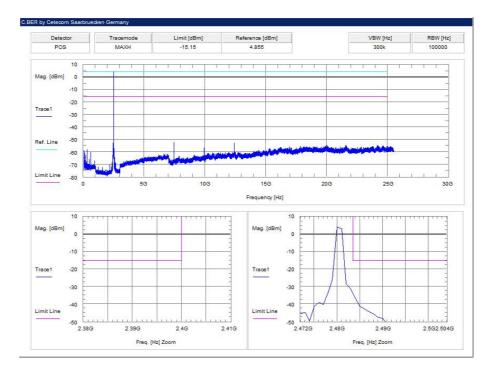

## Plot 2: mid channel

# Plot 3: highest channel

# 12.9 Spurious emissions radiated below 30 MHz

## **Description:**

Measurement of the radiated spurious emissions in transmit mode below 30 MHz. The EUT is set to single channel mode the transmit frequencies are 2402 MHz, 2440 MHz and 2480 MHz. The measurement is performed in the mode with the highest output power. The limits are recalculated to a measurement distance of 3 m according the ANSI C63.10.

# 12.10 Spurious emissions radiated 30 MHz to 1 GHz

## **Description:**

Measurement of the radiated spurious emissions in transmit mode. The EUT is set to single channel mode and the transmit frequencies are 2402 MHz, 2440 MHz and 2480 MHz

| Measurement parameters  |                      |  |  |  |  |  |
|-------------------------|----------------------|--|--|--|--|--|
| Detector                | Peak / Quasi Peak    |  |  |  |  |  |
| Sweep time              | Auto                 |  |  |  |  |  |
| Resolution bandwidth    | 3 x VBW              |  |  |  |  |  |
| Video bandwidth         | 120 kHz              |  |  |  |  |  |
| Span                    | 30 MHz to 1 GHz      |  |  |  |  |  |
| Trace mode              | Max hold             |  |  |  |  |  |
| Measured modulation     | GFSK                 |  |  |  |  |  |
| Test setup              | See sub clause 7.1 A |  |  |  |  |  |
| Measurement uncertainty | See sub clause 9     |  |  |  |  |  |

The modulation with the highest output power was used to perform the transmitter spurious emissions. If spurious were detected a re-measurement was performed on the detected frequency with each modulation.

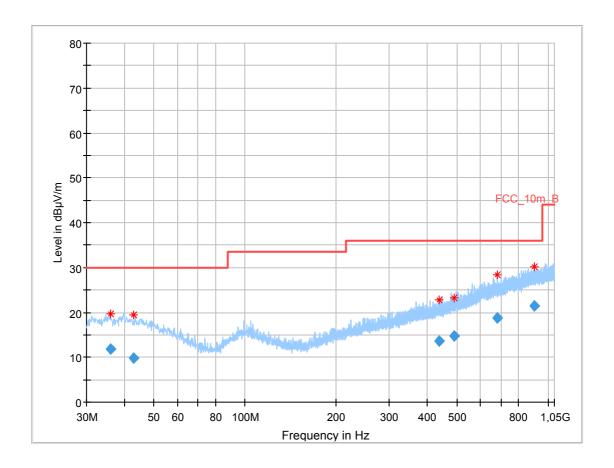

## Limits:

| FCC  |              |             | IC                   |  |  |  |  |  |  |
|--|--------------|-------------|----------------------|--|--|--|--|--|--|
| TX spurious emissions radiated   |              |             |                      |  |  |  |  |  |  |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |              |             |                      |  |  |  |  |  |  |

# 12.11 Spurious emissions radiated above 1 GHz

## **Description:**

Measurement of the radiated spurious emissions in transmit mode. The EUT is set to single channel mode and the transmit frequencies are 2402 MHz, 2440 MHz and 2480 MHz. The measurement is performed in the mode with the highest output power.

| Measurement parameters  |   |  |  |  |  |  |
|-------------------------|---|--|--|--|--|--|
| Detector                | Peak / RMS  |  |  |  |  |  |
| Sweep time              | Auto  |  |  |  |  |  |
| Resolution bandwidth    | 1 MHz   |  |  |  |  |  |
| Video bandwidth         | 3 x RBW   |  |  |  |  |  |
| Span                    | 1 GHz to 26 GHz   |  |  |  |  |  |
| Trace mode              | Max hold  |  |  |  |  |  |
| Measured modulation     | GFSK  |  |  |  |  |  |
| Test setup              | See sub clause 7.2 A (1 GHz - 18 GHz)<br>See sub clause 7.3 A (18 GHz - 26 GHz) |  |  |  |  |  |
| Measurement uncertainty | See sub clause 9  |  |  |  |  |  |

The modulation with the highest output power was used to perform the transmitter spurious emissions. If spurious were detected a re-measurement was performed on the detected frequency with each modulation.

## Limits:

| FCC  |                                |             | IC                   |  |  |  |  |  |  |  |
|--|--------------------------------|-------------|----------------------|--|--|--|--|--|--|--|
|  | TX spurious emissions radiated |             |                      |  |  |  |  |  |  |  |
| In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)). |                                |             |                      |  |  |  |  |  |  |  |
|  | §15.                           | 209         |                      |  |  |  |  |  |  |  |
| Frequency (MHz)  | Field streng                   | th (dBµV/m) | Measurement distance |  |  |  |  |  |  |  |
| Above 960 54.0 (Average) 3   |                                |             |                      |  |  |  |  |  |  |  |
| Above 960  | 74.0 (                         | Peak)       | 3                    |  |  |  |  |  |  |  |
